A product from Connectix (*Virtual PC*) enables Mac users to *put a fast, powerful PC inside your Mac* thus enabling you to use Internet Explorer and to access ALL views in PROMAIL Version 5. Virtual PC installs like a Mac application, sets up easily in a Mac OS environment, and then runs as a window on your Mac desktop.

Background

Version 5 takes advantage of certain features only available through the Internet Explorer browser such as Active X control and Dynamic HTML. Some of the features include the ability to use:

- Crystal Reports Viewer (to view / print reports)
- Version 5 menus
- Calendar boxes

Until now, Mac users could only access specific views restricted to Public Users via Netscape 4.X or higher. Using Virtual PC now lifts this previous restriction for MAC users.

Details

You and / or your clients can take advantage of *Virtual PC* by following the steps outlined below:

1. Ensure you meet the minimum system requirements for using Virtual PC software highlighted in Connectix's website by connecting to one of the following links:

G3 or G4 Mac Models:

<http://www.connectix.com/products/vpc4.html>

Older Mac Models:

http://www.connectix.com/products/vpc3_ease.html

Important Note: Our experience indicates that a minimum of 128 Meg of RAM is required to efficiently run Version 5.

2. If your Macs meet the system requirements, purchase the *Virtual PC* software (with Windows 98) from Connectix's website for approximately \$200.
3. Visit our website at the following link to download specific functionality (various plug-ins and downloads):

<http://www.sma-promail.com/SMAWeb/Demos/demochecklist.asp>

Important Note: The Virtual PC comes with Internet Explorer 5.0. However, Version 5 requires using Internet Version 5.1 or higher.
